INDEPENDENT PROJECTS

RETRONET | SOCIAL NETWORKING APP

Built a social networking site on the LAMP Stack. Signed up over 150 non-bot users in less than 3 hours. Site crashed shortly after due to excessive traffic. Resembles an early version of Facebook. Unique features included social discovery, anonymous confessions and profile views (by gender)

BLOGPEDIA | LIGHTWEIGHT BLOG ENGINE

Built in Python and hosted on the Google App Engine. Allows registered users to create personal blogs. Users can comment on and share each other's posts on Facebook, Google+ and Twitter.

DORIAN | MICROBLOGGING APP

Built on Ruby on Rails as part of Hartl's Tutorial. Resembles a primitive version of Twitter. Users can publish microposts and follow each other.

ROUNAK'S WIKI | MULTI USER WIKI

Implemented a wiki as final project for the CS-253 Course on Udacity. Allows users to view, edit and create articles upon signing up.

DEVELOPER'S DESKTOP | PRODUCTIVITY CHROME EXTENSION

Fetches the latest news and comics from HackerNews and xkcd respectively every time a new tab is opened. Other features include a to-do list and a repository for some of the most useful links to developers. Available on the Chrome App Store. Currently has over 25 weekly users.

Timetable Generator (C++) • Sports Registration System (Java)

Pong (OpenGL) • CSS Helper (JS) • Webcomic Extension (Chrome)

Torrent Bots (Python)

EXTRACURRICULARS

THE LITERARY SECTION | FORMER JOINT SECRETARY
